**Network systems and data communications analyst**  
**What they do:** Assemble networks from the bottom up, from data to email and voicemail systems.  
**Why it's hot:** More companies are building networks to speed office communications and create better access to data.

**Pros:**

- Telecommuting is often an option.
- The skills qualify for other technology work.
- Many small and medium-sized businesses are adding heavily to networking groups.

**Cons:**

- Jobs are very task-based, so a network problem could mean missing or weekend work.

# IDC Skill Gap Study South Africa

CITIZEN, Moneyweb Business  
Monday, 10 July 2006, p. 2

## Shortage of techies: risk of IT blackout in 2010

Ana Monteiro

AS THE 2006 FIFA World Cup went off without any technical hitches in Germany, the information technology industry (IT) in SA is ringing alarm bells about whether it will be as hassle-free when the country hosts the sporting spectacle in 2010.

Spurred by the release of a report last week that found SA needs 70 500 networking professionals just to fill current vacancies in the market, commentators are concerned that South Africa

online – as access platforms need to be secure at all times.

Hamid says that focus on basic IT skills such as using word-processing, spreadsheet and e-mail packages has led to the neglect of developing more advanced skills. "Had we not done the study, we wouldn't have known that we now are in dire straits. By 2009 we are looking at a shortage of 113 000 network professionals," he says.

Benjamin Mophatlane, the deputy CEO of Business Connection, the biggest outsourced

SA in dire situation with skills shortage of 100 000 in ICT sector

## SA in dire situation with skills shortage of 100 000 in ICT sector

By THOMAS MCLACHLAN  
Business Correspondent

THE frightening skills shortage in South Africa will soon range the information and communications technology (ICT) industry, according to a new report which found that more than 100 000 extra professionals would be needed by 2009.

Within three years the demand for networking skills in South Africa will exceed supply by 24%. This will leave a shortage of 113 000 skilled people in the sector.

At least 70 000 of these are in specialised fields such as wireless technology. This is one of the findings of a new report on the demand for networking skills across Middle East and Africa by the Industrial Development Corporation.

"The study findings represent a call to action to governments, the private sector, educators and individuals to do more to address these needs," said Clive Fynn, Cisco Systems South Africa general manager. Clive Fynn, Cisco Systems, commissioned the report.

"We began feeling the crunch in the first quarter of this year. We wanted to bring in 20 new entrants with focused skills, but couldn't find them," said Fynn.

"If plans are not put into place now, technology adoption, business competitiveness and market growth will be placed at risk."

The study carried out average networking y 2006, emphasising on in comparison to

"The government identified the shortage of suitably skilled labour as the single biggest threat to the successful implementation of the Accelerated and Shared Growth Initiative of South Africa (Asgisa)," said education department director general Duncan Hindle.

Asgisa was launched earlier this year by deputy president Phumzile Mlambo-Ngcuka. "Not having sufficient networking skills available... influences the competitiveness of not only CITIZEN, Moneyweb Business whole," Friday, 7 July 2006, p. 1

"The g

Fynn, re under i science a the skill more an provide encourag There

the count have been not benef Fynn s recently subjects choose t level,"

ana MONTEIRO THE IT sector is short of 70 500 people with networking skills, an authoritative study reveals.

And unless urgent action is taken, the deficit of networking professionals will climb to 113 900 by 2009.

These findings were made by ICT research consultancy IDC. Its research was commissioned by Cisco Systems, the biggest networking company in the world.

"Demand for networking skills still outstrips supply and is accentuated by high economic growth in South Africa," author of the White Paper, Philip van Heerden, said.

"In addition to networking skills, significant gaps were found in the areas of the more advanced networking skills such as security, Internet protocol telephony and wireless networking skills."

Networking involves linking computers and computer systems for information to be shared and is becoming more prevalent.

The study stated that 86% of respondents used the network as a key platform to share processes with important partners, suppliers, and customers.

While these skills are sought after the world over, their paucity is more evident in SA than in western and eastern Europe.

"The South African gap is twice as wide as that of eastern and western Europe," said Clive Fynn, GM of Cisco Systems SA.

Looking to 2008, forecasts show demand will outstrip supply by

## Skills gap may thwart SA's tech boom

HOPES that liberalisation of the telecoms sector will let SA use new technologies to catch up in the global economy could be thwarted by a severe skills crisis.

Firms eager to use cost-cutting technologies face another hurdle in finding people able to implement and manage them.

The skills shortage could damage government's chance of achieving its growth targets, research house IDC has warned.

Last year, companies were un-

porting business processes. All the respondents said in the past they had recruited purely locally in the future. 14% expect to recruit internationally to find more advanced skills. Many hope to recruit South Africans who are coming home after gaining experience abroad.

"We need to get an understanding of where the skills gap is," said Cisco SA GM Clive Fynn.

Companies can still find general networking skills relatively if they are well-versed with little

Cisco is working with the education ministry and the Western Cape government to try to influence school curriculums.

Numerous firms and organisations are clamouring to put forward their ideas of what should be taught in schools, but Cisco says it has piqued the education department's attention.

"Government has been very clear that if we are to go to transform the working environment, one of the key fields we need to promote is science and technology."

Cisco has also partnered with the Nelson Mandela University and the Cape Peninsula University of Technology to create training courses that offer what the market needs. But the pace at which educational institutes evolve means it will be next huge before the new curriculums are even introduced, and far longer before the first graduates reach the market.

These university courses will include internships with hi-tech companies to give the students work experience and make them marketable once they graduate.

Cisco runs its own two-year internship courses, but with only 10 people going through the system each year, its effect on the skills gap is almost negligible.

## Major skills shortage in the ICT sector

By Thomas McLachlan

The skills shortage in South Africa will soon ravage the Information and Communications Technology industry, according to a report which found that over 100 000 extra professionals will be needed by 2009.

Clive Fynn, Cisco Systems South Africa general manager, said: "The findings represent a call to action to governments, the private sector, educators and individuals to do more to address

choose their subjects at higher education level".

**CONCERN:** A survey has found that 100 000 extra professionals will be needed in the ICT sector by 2009.

these needs."

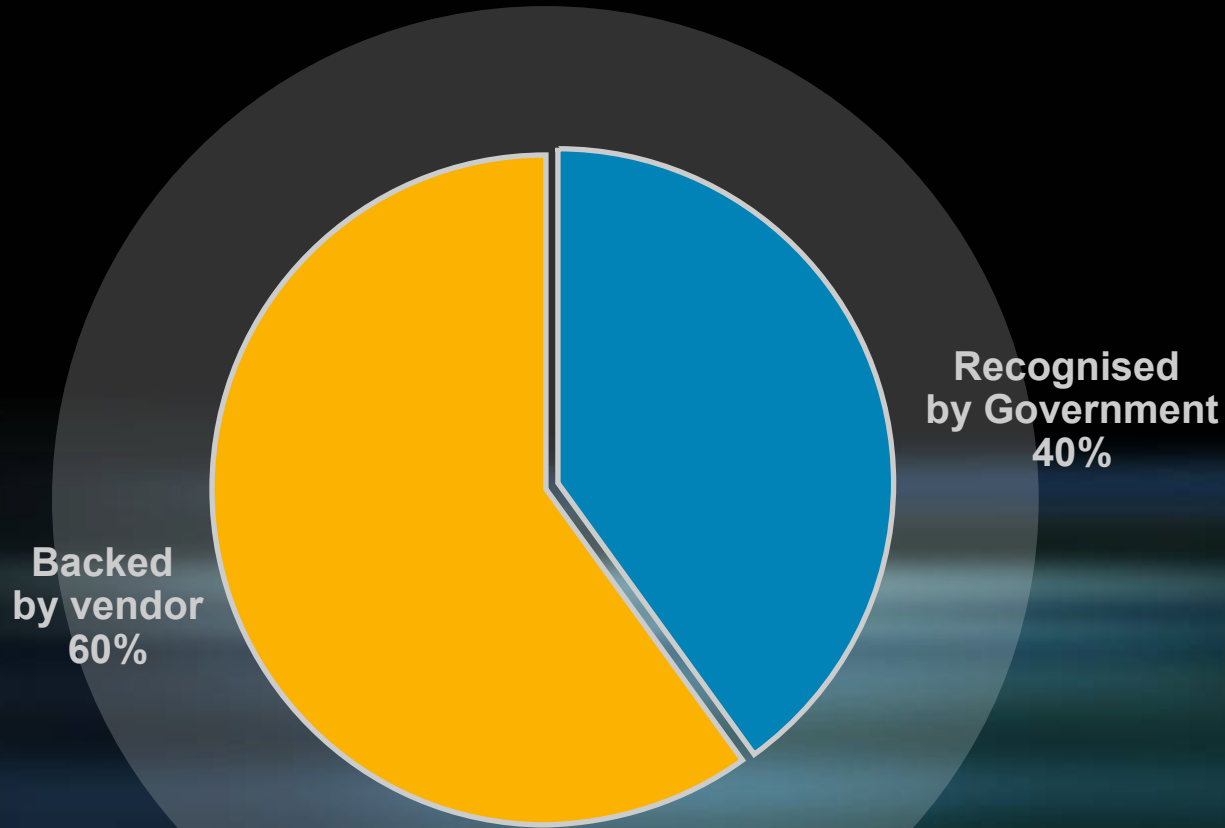

"We began feeling the crunch in the first quarter of the year," he said. "If plans are not put into place now, technology adoption, business competitiveness and market growth will be at risk."

Fynn said some institutions had recently begun offering networking related subjects, and with 500 000 graduates currently unemployed nationally "we need to address how [students]

# Value of State and Vendor Backed Certification

Thinking about certifications, which of these elements do you believe to increase their value?

# Technology is Key to Development

“ The two fundamental equalizers in the global economy are the Internet and education. The Internet is creating unprecedented opportunities for businesses, individuals and governments and the winners will be those with the right skills and knowledge to compete.”

John Chambers  
President and CEO  
Cisco Systems, Inc.

# Cisco Networking Academy Program

- The Cisco Networking Academy is a dynamic educational program that teaches students relevant technology skills
- This increases students' competitiveness in the global marketplace and opens doors to different employment opportunities

# History of Cisco Networking Academy Program

- Created as a solution for schools installing networks in the US
- **Challenge:** Schools lacked financial and human resources to manage networks
- **Solution:** Curriculum to train teachers, staff, and students to wire and maintain networks in their schools
- Academy program launched
  - August 1997 in the United States with 64 Academies in 7 states
  - Globally in 1998 – Argentina, Australia, Canada, and UK/Ireland

# Network Academy is Strong

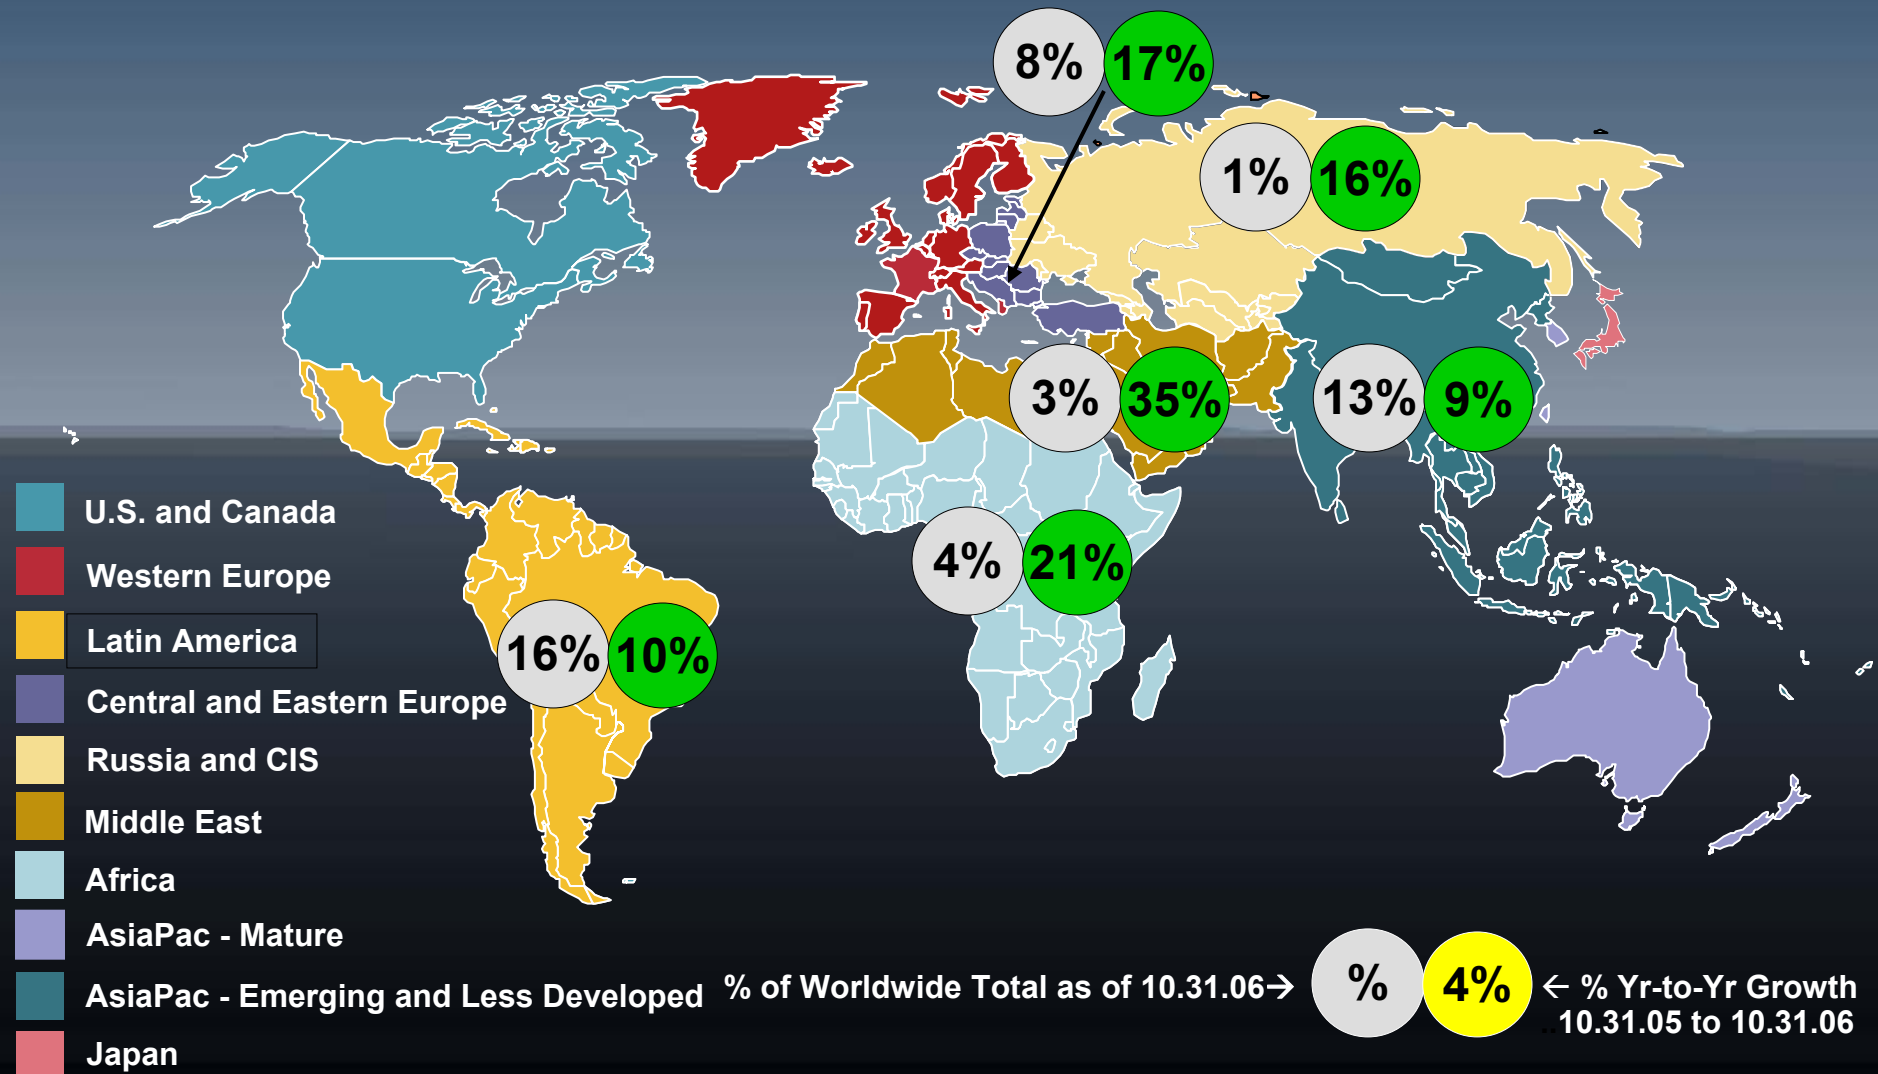

Cisco's longest running and most successful education initiative

Quickview:	#	Success Metrics	
Participating Countries	166	Percent of Students indicating they <u>use Networking Academy skills on a daily basis</u>	91%

# Government Partnership Examples

**CAMEROON:** 11 Acads; 326 students; 428 CCNA 4 graduates

## Key Initiatives

- MOU for Cameroon ICT Transformation through NetAcad
- Networking Academy Taskforce:  
ANTIC, Ministries of Education, Post & Telecom, Women's Affairs

## Objectives

- Launch 30 new Networking Academies over next three years
- One Academy per province
- Instructor capacity building

**ETHIOPIA:** 14 Acads; 432 students; 167 CCNA 4 graduates

## Key Initiatives

- 100 Academies: 10 completed, 90 more identified
- High Schools Integration: 269 high schools, 168 vocational & teacher training colleges

## Objectives

- Launch ICT education and training program over next two years
- 600 schools across the country delivering ICT training
- Deliver digitized E-Learning curricula

Stats as of Oct 31, 2006

# Government Partnership Examples

## Nigeria:

### Key Initiatives

- FME 100 Academies
- Networking Academy Taskforce:  
FME, Cisco Systems

### Objectives

- 32 000 First Degree Holders in an FME survey between 1996 – 2006, 60% still unemployed (i.e. 20 000 Degree holders unemployed). This has led to the Nigeria 20000 initiative through the creation of 100Acads

- International Telecommunication Union (ITU)
- United Nations Volunteers (UNV) / (UNITeS)
- United States Peace Corps
- United Nations Development Fund for Women (UNIFEM) – Arab States
- United Nations Relief and Works Agency for Palestine Refugees in the Near East (UNRWA)

# NetAcad Mission for Least Developed Countries

1. Help eradicate poverty, support MDG's
2. Provide ICT education to underserved communities (female, community centers, slums)
3. Provide a wide range of career opportunities for graduates

# Least Developed Countries Initiative— “A Call for Action” - UNDP, UNV, USAID

## Results to Date:

- 51** Countries ( 40 LDCs, 11 non-LDCs in Africa)
- 204** Academies
- 589** Instructors trained in Africa, Asia, Arab States
- 11,475** Continuing CCNA Students as of Sept 2006 (27% female)
- 7,478** Graduates

GENDER INITIATIVE: 50/30

LDC Phase II – Africa 100, Afghanistan Expansion, PLAN-IT

# Cisco Networking Academy Program

## *Gender Initiative*

- Increase the number of females pursuing academic and career opportunities in Information Technology

- Gender Initiative established in 2000 “50/30”

Increase females’ access to IT training and career opportunities

Utilize Academy program as a model / gender laboratory

Collect and share information on best practice recruitment and retention strategies

Develop tools and resources to attract and retain more females to IT

Female role models

# International Development Initiatives

## Cisco Gender Initiative

- **EDUCATE** young women on careers in Information and Communications Technology (ICT)
- **EXPLORE** opportunities for females to participate in the Cisco Networking Academy Program
- **EMPOWER** females to succeed and continue their education in engineering and computer science
- **CONNECT** women to other women in ICT
- Create a **PIPELINE** of females entering the ICT workforce

# Student Successes

- At 37 years of age, there is no turning back for Francis Okethwengu. He is currently unemployed- but has no regrets as he is now a student of CCNA, a far cry from his days as cleaner.
- Worked for 5 years as a cleaner with Jefkee General Cleaners contracted to the University. Saw a light in the academy program and quit his job to become a full time student.

*“I did a short time course in Computer Literacy (prior to the Cisco classes) which built a foundation for me in the computer field and therefore thought it necessary to venture into the IT field by way of embarking on CCNA. This has gradually and significantly improved my skills in IT. I am confident that with this certification, I will get a better job and will be able to provide a better life for my wife and 5 children.”*

# Thank You

**CISCO**
